AMENDMENT UNDER 37 C.F.R. § 1.111

Appln. No.: 10/628,459

Docket No: Q76028

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph on page 33, lines 8-21 with the following amended

paragraph:

From the results shown in Fig. 9, the following points became clear.

(1) The value of the full width at half maximum of the polycrystalline thin film consisting

of Yb₂O₃ was dependent on the temperature of the polycrystalline substrate A, and in the case

where the temperature was too low or two high, the full width at half maximum exhibited a

tendency to increase.

(2) When the polycrystalline thin film B was formed on the polycrystalline substrate A

while maintaining the temperature of the polycrystalline substrate A from 150 to 250°C, a

polycrystalline thin film B having superior orientation properties, where the value of the full

width at half maximum was equal to or less than 20°, was stably obtained.

(3) In particular, in the case that the temperature of the polycrystalline substrate A was

within a range from 170 175 to 200°C, the value of the full width at half maximum was equal to

or less that 19°, which is a further reduction of the value, and was therefore more preferable.
